

CAS: Automated customs clearance

CAS (Customs Automation System) is a **multi-country native-cloud customs management solution**, built on the Microsoft Azure platform delivered as a service (SaaS). It is designed to manage regional and worldwide customs and trade compliance quickly and accurately, with a digital-first approach, helping customers stay ahead of the digitisation of customs processes.

Everything starts when you send your shipment data to CAS. This can either be done automatically by integrating with our APIs or by uploading an Excel template. Your shipment data is being processed into a declaration and/or Special Procedures stock actions based on your setup. As CAS is **connected to customs authorities in different countries**, messages from customs are retrievable directly in CAS providing you with **status updates of your shipments**. Has the shipment been accepted and released, was a customs error sent back or does customs want to do a physical or documentary check? You can follow the entire flow in CAS. And if changes or additions to your declaration are needed, you can easily make these changes and (re)submit your declaration to customs authorities.

When Special Procedures like Customs Warehouse, Inward Processing, Outward Processing, or End Use apply, the **stock administration is managed** in CAS as well. Stock levels are being increased with an incoming shipment and reserved and decreased with an outgoing one. CAS keeps the storage locations into account and which customs procedure applies. Get an overview of your stock levels at all times and manage free and bonded stock in one place.

Key benefits

→ Assured Compliance & Continuity

Say goodbye to costly surprises and mitigate risks. Leave the legal details to us. C4T continually updates legislation and compliance information so your paperwork sails through every time. CAS' guaranteed 24x7x365 availability ensures business continuity.

→ Visibility & Strategic Insights

Deliver strategic insights and a clear view of operations by having all data, flows, duty costs, and declaration statuses in one place. Manage your declarations and Special Procedures in multiple countries via one single platform delivering full traceability at all times.

→ Automation

Save money and accelerate your time to market with automation, centralisation, standardisation, and the ability to bring your customs and trade functions in-house.

→ Scalability

CAS scales as you need, making sure you cover the necessary processes, functional modules, and country scope needed now, but is fit for the future as your business grows.

→ Easy Adoption & Integration

Get up and running quickly with intuitive APIs and an easy-to-use User Interface, with the support of our Onboarding Experts.

Check how you can save on customs duty and administration costs by taking customs in-house, in our [self-filing vs representation white paper](#).
