Envision a Customs Control Tower

CAS Insights, our Visibility & Analytics Tool, allows you to **gather declaration and Special Procedures data** filed by your subsidiaries or by your external customs broker and **transform it into at-a-glance dashboards** for analytics and controls. CAS Insights can process data from any country in which declarations, with or without Special Procedures applied, are filed, regardless of the language or data structure. It provides you with a centralised view of all of your customs-related activities.

Product sheet Insights

How it works

Customs brokers or any of your locations worldwide can **upload declaration or Special Procedures data to CAS** Insights via Excel or, for high-volume transactions, **by using our standard APIs**. C4T provides templates and integration assistance, if necessary.

Data from different countries, in different languages, and with different form fields is automatically **standardised and consolidated into a centralised repository**.

Data is segregated based on user rights. Each team member has visibility into the information pertinent to their role.

Data can be filtered and sorted by date range, customs flow, receiving country, and more so you can get the information you need. Content and graphs can be easily downloaded for use in presentations.

Dashboard visualisations are grouped by operational, performance, and financial information for at-a-glance insights that move the needle on operational excellence and savings.

Standardised reports and views include number of declarations, customs errors, validation errors, total value exported, performance and speed of filing, total and self-assessed customs duties, and much more.

CAS helps us support our rapidly expanding export customers. We are realising significant improvements in the time-critical export shipment process. With the investment in our Wielsbeke plant, we will increase our capacity by 50%. CAS helps the shipping department keep pace with our growth and realise bottom-line customs duty savings.

**Carmen Wallays, Procurement & Logistics Director,
Agristo**

Key benefits

- **Structured** declaration and Special Procedures data can be easily accessed, shared, and analysed to optimise customs processes.
- **Effortless.** The necessary data is provided by your customs broker or any of your offices worldwide and uploaded directly into CAS.
- **Full visibility** into your operations via easy-to-read graphs, maps, and dashboards with extensive reporting capabilities.
- Company-wide customs data can be accessed in one **centralised platform**.
- **Compare data** across all of your import and export activities and **standardise procedures** based on what's working.
- **Identify** duty and administration **cost savings and detect errors and anomalies** in data, such as commodity codes or customs value.
- **Completely scalable.** Add business units and users or new locations in minutes.

CAS Insights provides you with the data you need to give insights back to the organisation and support organisational growth. Break free from Excel spreadsheets and email notifications. Break into your data with CAS Insights.
