Envision a Customs Control Tower

The CAS Insights module allows you to **analyse the totality of your customs operations**. As it's fully integrated with the CAS declarations and Special Procedures modules, it **consolidates data** of your self-filed declarations. Moreover, it can centralise retroactively uploaded declarations that were filed by your external customs brokers or your worldwide subsidiaries.

The **pre-delivered dashboards and reports** provide insights into the amount and types of declaration filings and duty payments. Pre-defined KPIs and charts make it easy to analyse the reasons for manual work your team had to do as well as the duties you had to pay. This helps you reduce manual work in your customs processes and save on customs duties going forward.

The Insights module regularly gets enhanced with more dashboards and charts, providing more insights over time.

Product sheet Insights

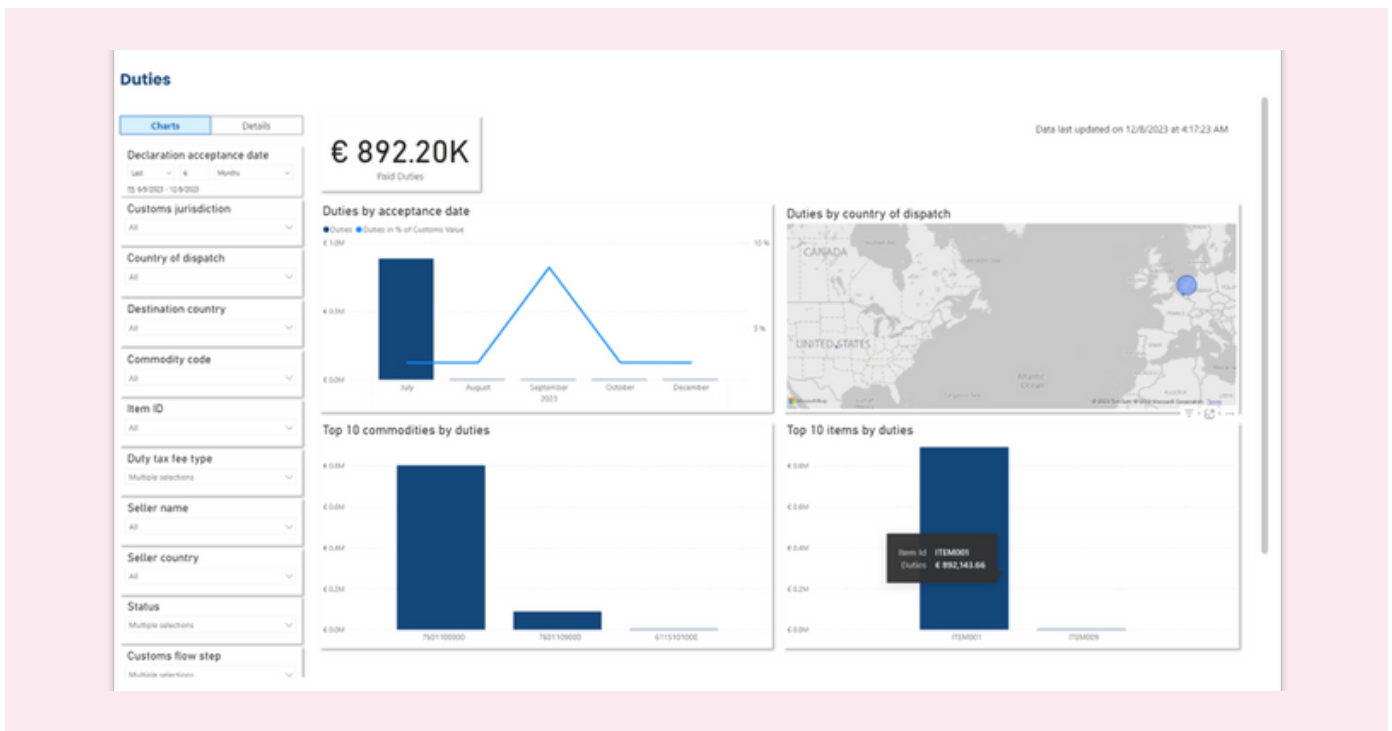

How it works

Declarations and Special Procedures data from your customs operations in CAS gets **visualised in easy-to-read graphs**. The **standardised reports and views** provide information on the number of declarations by creation month, the number of declarations requiring manual work, the amount of duties by country of dispatch, top 10 items by duties, and much more.

CAS Insights automatically includes your declarations and Special Procedures data. Next to that, you can upload declarations filed by your customs brokers in countries that are not supported by CAS yet. This provides a **worldwide view on your customs business**.

Data can be filtered by status, country of dispatch or destination, and more so you can get the information you need. Content graphs can be easily downloaded for further analysis.

In the future, CAS Insights will be extended with dashboards on suspended duties, savings because of preferential origin, and a financial KPIs dashboard for your finance department.

Key benefits

- **Identify** duty and administration **cost savings and detect errors and anomalies** in data and processes.
- **Full visibility** for you and your management team via dashboards with KPIs, charts, and maps that are relevant for your customs business.
- **Effortless and hassle-free**. CAS Insights works out-of-the-box with CAS. No need for a dedicated analytics product, no need for manual export and import data. The necessary data is pulled from your CAS declarations and Special Procedures.
- **Centralised platform** for company-wide customs data, including data provided by your customs brokers or your worldwide subsidiaries.

CAS Insights provides you with the data you need to give insights back to the organisation and support organisational growth. Break free from Excel spreadsheets and email notifications. Break into your data with CAS Insights.

CAS helps us support our rapidly expanding export customers. We are realising significant improvements in the time-critical export shipment process. With the investment in our Wielsbeke plant, we will increase our capacity by 50%. CAS helps the shipping department keep pace with our growth and realise bottom-line customs duty savings.
